

COMPLETE PROJECT DOCUMENTATION

The Scent Pair Project Dossier

CLIENT PROPOSAL & TECHNICAL SPECIFICATION

Signature scents, made for two.

PREPARED FOR

His & Her's Scents

DOMAIN

thescentpair.com
thescentpair.com.ng

PREPARED BY

SymphoMe
abdulhamiid@symphome.com

DATE

10 September 2026
Valid 30 days

PART ONE

The Concept

The idea, the look, the pages and the ten animated moments. Written to be read by the client, and to be argued with.

What's Inside

- 01 The Idea
What we are building, and why it works
-

02	The Look & Feel	Colour, light and the feeling of the brand
03	The Website, Page by Page	Every screen a visitor will see
04	The Ten Signature Moments	The animation experience — the epic part
05	How Customers Order	The journey, and WhatsApp checkout
06	What We'll Need From You	Photography, video and words
07	Over To You	Add, remove or change anything here

HOW TO READ THIS

This is a picture of the website, not a contract. Nothing here is fixed. Read it, mark it up, tell us what you want more of and what you want gone — then we'll price and schedule the version you actually want. Section 07 has the questions we need answered.

*Because sometimes, a scent is more than a fragrance.
It becomes part of your story.*

HIS & HER'S SCENTS

SECTION 01

The Idea

The whole thinking, on one page.

You are not selling perfume. You are selling the idea that two people can share one signature — that a fragrance can hold a relationship inside it. That idea is genuinely yours, and almost nobody is building a website around it. So that is what this website will be built around.

Most fragrance sites are catalogues: a grid of bottles, a price, a buy button. Efficient, and completely forgettable. But your product is emotional before it is transactional — someone buying a pair for themselves and their partner is buying a gesture, not comparing top notes. A site that behaves like a catalogue sells your product at the price of a commodity. A site that behaves like a film sells it at the price of a gift.

So the plan is a **cinematic brand experience**. The bottle turns as you scroll. Gold light moves across the glass. Mist hangs in the air in slow motion. The “His” and “Her’s” halves of your world sit side by side until the visitor pulls them apart with their own hand. Ten named animated moments, each one there to do a job — hold attention, explain the product, or make someone want to be part of the story.

Underneath the cinema, something deliberately simple. Every product page ends in one action: **order on WhatsApp**, with the product, size and price already written into the message. No card forms, no abandoned carts. You talk to your customer, you confirm, you get paid the way you already get paid. Card checkout can be switched on later without a redesign.

THE THREE THINGS THIS SITE HAS TO ACHIEVE

1. **Make the brand feel expensive** — so the price is never questioned.
2. **Explain “made for two” without a paragraph of text** — the interface itself teaches it in the first eight seconds.
3. **Turn visitors into conversations** — which is where your best sales come from right now.

In short, you get

- A custom-designed, fully animated seven-page website on **thescentpair.com**
- Ten signature animated moments built for this brand — not template effects
- Individual fragrances and His & Her’s pair sets, with room to grow the range
- WhatsApp ordering with the product details pre-filled, plus mailing-list capture
- Mobile-first — most of your visitors arrive on a phone, so it is designed there first
- Fast loading, even on Nigerian mobile data, through professional media delivery
- Google and social setup, so the brand looks right whenever it is linked or posted

SECTION 02

The Look & Feel

Your own words and your own logo are the brief.

WHAT THE BRAND SAYS	WHAT THE WEBSITE DOES ABOUT IT
<i>"To make fragrance feel more personal."</i>	The site speaks to one person — <i>your</i> scent, <i>your</i> story. Visitors explore what a fragrance is made of rather than being told what to like.
<i>"Inspired by two people sharing something special."</i>	A split world : His and Her's as two halves of one screen, joined by a gold seam the visitor drags across. Two halves, one object — the concept, made physical.
<i>"Made to complement, connect, and create memories."</i>	Pairs come first, singles second. Each pair page shows how the two fragrances relate, with their shared notes drawn as a connection between the bottles.
<i>"A scent becomes part of your story."</i>	A Stories section where couples' scent stories are published — your content engine, your social proof, and the reason people come back.

The palette

Your logo already made the decision: **deep black, liquid gold, and light**. We hold it with discipline, because discipline is what separates expensive from loud. Gold appears as *light* — reflections, seams, hairlines, glows — never as large filled shapes. Everything else is black, near-black and warm off-white.

						
ONYX	INK	FOIL GOLD	ANTIQUE GOLD	MIDNIGHT	ROSEWOOD	PARCHMENT
#0B0A09	#16130F	Gradient	#B08D3A	His	Her's	#F6F2EA

The two accent tones — a cool midnight for **His**, a warm rosewood for **Her's** — are subtle on purpose. They give the split-screen a temperature difference the eye reads instantly, without turning the site into blue-for-boys and pink-for-girls. Typography is a high-contrast serif in the spirit of your logo lettering, paired with a quiet sans for prices, sizes and buttons.

ONE THING WORTH SAYING ABOUT "EPIC"

It will be. But luxury motion works through contrast — long, calm, near-empty black screens, broken by one moment of drama. If everything moves, nothing is impressive. The still moments are what make the set pieces land.

The Website, Page by Page

Seven pages at launch. Add or remove any of them.

1 · Home — the film

The page that has to earn the next thirty seconds. It opens on black; the monogram draws itself in gold; two bottles drift in from opposite edges and meet in the centre, where a seam of gold light ignites between them. From there the visitor scrolls through a sequence rather than a page — the bottle turning, the notes blooming, the split His / Her's world, the slow-motion spray, three featured pairs, and the brand story. Someone who only ever sees this page understands the brand and knows how to order.

2 · The Collection

All fragrances, filterable by **His, Her's, Pairs** and scent family. Bottles arrive on scroll in a staggered rhythm, lifting and catching light as the cursor passes. Pairs are shown as a single unit and priced as a set, because the pair is the hero product.

3 · Fragrance Page

Where the sale happens, so it works hardest. A large bottle the visitor can rotate themselves. The notes — top, heart and base — as an animated diagram, where touching a note brings up the ingredient itself. Size and price. Longevity shown as elegant meters rather than paragraphs. Then one gold button: **Order on WhatsApp**. If the fragrance is half of a pair, its partner appears with a line drawn between their shared notes and an offer to take both.

4 · Pairs

The page that exists nowhere else in the fragrance market. Each pair gets a full-screen split: his world one side, hers the other, and a gold divider the visitor drags across — imagery, colour and copy changing as they do. In the centre, where the halves meet, sits the note both fragrances share.

5 · Our Story

Your founding words, told as scroll-driven chapters on black. Text reveals line by line as the visitor moves down, with single words lifted in gold, and full-bleed imagery between chapters.

6 · Stories

A place to publish scent stories — a couple and the fragrance they wear, a customer and the memory attached to a bottle, a note about an ingredient. Each one is a page Google can find and a reason for someone to return. Costs almost nothing to run, and compounds every month you feed it.

7 · Contact & Enquiries

WhatsApp, Instagram, email, and a short form for wholesale, gifting and bespoke enquiries — plus the practical answers people want before spending money: delivery areas and timing, authenticity, returns.

Working quietly in the background on every page: mailing-list capture with a first-order incentive; designed social cards, so links render with your logo instead of a grey box; and proper Google setup, so your fragrances can appear in search with prices and images.

SECTION 04

The Ten Signature Moments

The animation experience, named. This is the part you asked to be epic.

Each of these is a designed, named set piece — not a generic fade-in. They appear in the order a visitor meets them, and each has a job beyond looking beautiful.

01

The Overture

LOADING — TWO SECONDS

Black screen. A single gold hairline travels across it and draws the interlocked H&H monogram in one stroke. The bottle resolves out of the darkness behind it. Then the light lifts, like a curtain.

Its job: turn the unavoidable moment of loading into the first impression instead of a delay.

02

The Meeting

HOME — THE HERO

Two bottles drift in from opposite edges of a black screen, each catching a moving highlight along the glass. They rest almost touching, and a seam of gold light ignites in the space between them. The wordmark reveals from behind that light.

Its job: state the whole concept — two, becoming one — in four seconds, with no words at all.

03

The Unveiling

HOME AND EVERY FRAGRANCE PAGE

As the visitor scrolls, the bottle turns — tied directly to their scroll, so they are turning it with their own hand. Scroll back and it turns back. Light travels the glass and the engraving comes into view as it passes the front. At the top of the turn, the cap lifts away.

Its job: give people the one thing they want online and cannot have — the feeling of physically handling the product.

04

The Sillage

AMBIENT, THROUGHOUT

Sillage is the trail a fragrance leaves behind. Here it is visible: a fine drift of gold particles following the cursor, gathering around the bottle, dispersing. On a phone it responds to how fast you scroll.

Its job: give the invisible product a visible form. Deliberately faint — felt more than noticed.

05

The Notes

FRAGRANCE PAGES — INTERACTIVE

Gold hairlines radiate from the bottle out to the individual notes, drawing themselves as the section arrives. Touch a note and the ingredient itself blooms into frame — bergamot, oud, vanilla, jasmine — lit in the same language as the bottle.

Its job: make the composition genuinely interesting to explore, which is what builds the confidence to buy a scent you cannot smell.

06

The Ritual

HOME — FULL-BLEED FILM

The screen goes black, then opens edge to edge on slow motion: a wrist, the press of the atomiser, mist blooming and catching backlight in gold, a hand at the back of a neck. Scrubbed by scroll, so the visitor moves through the ritual at their own pace. No sound, ever.

Its job: the emotional peak of the page — and the part most likely to be screen-recorded and reposted.

07

Two Halves

THE SIGNATURE MECHANIC

One screen, split by a vertical seam of gold. On the left, His — cooler light, midnight tones, his bottle, his words. On the right, Her's — warmer light, rosewood, her bottle, her words. Drag the seam and each world expands into the space the other gives up. Let go and it settles back to centre, both halves equal again.

Its job: be the thing people remember and describe to someone else — and the clearest possible explanation of what a pair is.

08

The Reveal

COLLECTION

Bottles do not simply appear. Each is uncovered by a gold wipe passing across its frame, staggered so they arrive as a series of reveals. As the cursor approaches, a card lifts toward it and the cursor becomes a small gold word: *Discover*.

Its job: make browsing feel like an unveiling rather than a search — and keep people scrolling to the pairs at the bottom.

09

The Letter

OUR STORY

Your words, set large on black, revealed line by line as the visitor scrolls, each line rising into place. Chosen words — *personal, connections, two, story* — catch the gold as they arrive.

Its job: make people actually read the story. Text that arrives at reading pace gets read; a wall of text does not.

10

The Close

FOOTER — EVERY PAGE

A thin line of gold fills slowly across the page, like liquid finding its level. Above it the monogram breathes — the faintest pulse of light, once every few seconds. Beneath it, the tagline.

Its job: make the end of the page feel like the end of something, rather than where the content ran out.

THREE PROMISES ABOUT ALL OF IT

It will be fast. Heavy visuals and quick loading usually fight each other; the difference is engineering. Media is sized and compressed automatically for each visitor's device and connection, and the heavy parts only load just before they are seen.

It will work on a phone. All ten moments have a designed mobile version — not a disabled one.

It will respect people who need less motion. Anyone whose phone is set to reduce motion gets an elegant still version, not a broken one.

SECTION 05

How Customers Order

WhatsApp at launch — a strategic choice, not a shortcut.

STEP 1

They arrive and they are drawn in

From Instagram, a shared link or Google. Within seconds the animation tells them this is a serious brand; within a minute they understand that pairs are the point.

STEP 2

They build confidence

They rotate the bottle, explore the notes, see the longevity, meet the partner fragrance.

STEP 3

One action

They tap **Order on WhatsApp**. Their WhatsApp opens with the message already written — product, size, quantity, price and a reference code. They add their name and address and send.

STEP 4

Your conversation

You confirm stock and delivery, take payment your usual way, and dispatch. And you now have that customer's number.

WHY THIS WAY

It is how Nigeria already buys

Your customers are comfortable in WhatsApp and often want to ask before they pay. Forcing a card form in front of that instinct loses sales rather than saving time.

WHY THIS WAY

Every order becomes a relationship

A card checkout gives you a transaction. A conversation gives you a contact you can message when the next pair launches — and lets you offer the pair, a gift box or a second size in the moment.

AND WHEN YOU OUTGROW IT

The site is built from the start so full card checkout — cart, Paystack or Flutterwave, order emails — can be switched on without a redesign. Usually worth doing somewhere around fifteen to twenty orders a week, when replying personally stops being practical. Until then, WhatsApp will out-convert a checkout, and it costs nothing to run.

What We'll Need From You

The honest answer: the media is the project.

A cinematic website is only as good as the film in it. The moments in Section 04 are frames for beautiful product media — and empty frames if it is not there. We'll give you the full shot list and direction; here is the shape of it.

BRAND & CONTACT

- ☐ Logo in its original format if it exists, plus a large transparent version; and the H&H monogram on its own
- ☐ WhatsApp Business number, Instagram, TikTok, contact email

PHOTOGRAPHY, PER FRAGRANCE

- ☐ Bottle on pure black, front-on, dramatic single-source lighting
- ☐ Bottle on white, for the collection grid and Google
- ☐ Two or three angles, plus detail of the cap and the label
- ☐ The pair together on black — the hero image of the whole site

THE TURNTABLE — FOR MOMENT 03, THE UNVEILING

- ☐ Bottle on a turntable, camera locked on a tripod, lighting unchanged
- ☐ **36 photographs** at ten-degree intervals for a full rotation — or one slow revolution on video, and we extract the frames
- ☐ Identical exposure on every frame, bottle never shifting. Three hero fragrances is enough to begin

VIDEO — FOR MOMENT 06, THE RITUAL

- ☐ Slow-motion spray, backlit so the mist reads gold against darkness
- ☐ Hands: the bottle lifted, the cap removed, the atomiser pressed; application to a wrist and a neck
- ☐ A couple, implied rather than explicit — a shoulder, a turn of the head, a hand
- ☐ Shot at 60 or 120 frames per second, no in-camera effects or text. **Sixty to ninety seconds** of usable footage, cut down to about twenty-five

WORDS & NUMBERS

- ☐ Product list: names, which are His / Her's / unisex, and which fragrances form pairs
- ☐ Sizes and prices, including pair-set pricing
- ☐ Notes for each fragrance — top, heart, base — and a few sentences in your own voice; we'll shape them
- ☐ One image per major note (bergamot, oud, rose, vanilla, amber, musk...) — or we can source these
- ☐ Delivery areas, timings and costs; returns; anything you want said about authenticity

IF THE MEDIA ISN'T READY

Common, and not a problem — but it needs a decision rather than a delay. Three routes: **you produce it** to our shot list; **we brief and manage** a photographer and videographer for you; or **we launch on carefully chosen placeholder media** in the brand's exact style and swap in yours as it is shot. Route three protects the launch date, but the site won't reach full effect until the real media lands.

SECTION 07

Over To You

Nothing here is fixed. Tell us what to add, cut or change.

This document exists to be argued with. Once you've marked it up, we'll come back with a timeline and a price for the version you actually want — not this one.

THE QUESTIONS THAT CHANGE THE MOST

- **The pages.** Seven at launch (Section 03). Any you don't want? Anything missing — a gifting page, a store locator, a wholesale section?
- **The moments.** Ten in Section 04. Which are must-haves, and which could wait for a second phase? Each one carries real build time, so cutting two or three is the easiest way to move the budget and the date.
- **The range at launch.** How many individual fragrances, and how many pairs? This drives the content work more than anything else.
- **Ordering.** Are you happy starting on WhatsApp, or do you want card checkout live from day one?
- **The media.** Which of the three routes at the end of Section 06?
- **The date.** Is there a launch you're working towards — a drop, a season, Valentine's, an event?

WHAT HAPPENS NEXT

1. You mark this up — scribble on it, or send notes, whichever is faster.
2. We talk it through, once, for about an hour.
3. You get a final scope with a timeline and a price against it.
4. Design begins the week after you say go.

Signature scents, made for two.

LET'S BUILD THE WEBSITE THAT DESERVES IT

PART TWO

Timeline & Investment

The schedule, the numbers and the boundaries — what it costs, what is included, and what sits outside this phase.

Contents

- 01 Timeline
Six weeks, five phases, three approval gates
-

02 Your Investment
One-off build, third-party services, annual running costs

03 Scope, Inclusions and Boundaries
What is covered, and what sits outside this phase

04 Aftercare, Ownership and Next Steps
Support, handover and how we begin

READ THIS SECOND

This annex follows *A Cinematic Fragrance House* — the concept and scope document. It holds the schedule, the numbers and the boundaries. Send it once the scope in that document has been agreed, so the figures are attached to a version of the site the client has already said yes to.

SECTION 01

Timeline

Six working weeks from approval to launch, with three points where your sign-off is required.

WEEK 6

Polish, Testing & Launch

Animation timing refined against the real media. Tested across iPhone and Android, Chrome, Safari and Samsung Internet, and on a throttled connection. Speed tuned to target. Domain connected, secure certificate issued, analytics live.

Gate 3 — you approve for launch. Then it goes live, and we watch it for a week.

WHAT MOVES THIS DATE

Two things, and only two. **Media arriving late** — the single most common cause of delay on projects like this, which is why Section 06 of the concept document exists. And **feedback cycles at the gates**: each gate assumes a response within two working days. If you need longer, that is entirely fine; the timeline simply shifts by the same amount. Nothing else in this schedule is dependent on you.

SECTION 02

Your Investment

Split into three: the one-off build, the services the site runs on, and what it costs to keep.

Figures shown as _____ are to be confirmed and inserted before this document is issued. Third-party costs are shown at their current published rates and are payable directly to those providers or reimbursed at cost — there is no mark-up on any line below. Naira figures for dollar-priced services are indicative and will move with the exchange rate.

A · One-off: design & development

ITEM	DETAIL	AMOUNT (NGN)
Brand direction & UI design	Moodboard, colour and type system, full designs for 7 pages on desktop and mobile, interactive prototype	
Motion design & animation build	The ten signature moments, with designed mobile variants and reduced-motion fallbacks	
Front-end development	All 7 pages built responsive, product system, filtering, forms	
Media pipeline & processing	Cloudinary configuration, turntable frame preparation, video encoding, responsive image delivery	
WhatsApp ordering & capture	Pre-filled order messaging, enquiry form, mailing-list integration	
Search, social & analytics setup	Metadata, structured product data, sitemap, sharing cards, analytics and event tracking	
Content loading	Loading of the launch range — up to 12 fragrances and 6 pairs	
Testing, launch & handover	Cross-device QA, speed tuning, domain and certificate, training session, written handover	
Total one-off investment		

Suggested payment structure: 50% to begin, 25% at Gate 2 (motion approval), 25% on launch.

B · Services the site runs on

SERVICE	WHAT IT IS FOR	RATE	STATUS
Cloudinary Media hosting & delivery	Stores and delivers every image, turntable frame and video. Automatically resizes and compresses for each visitor's device and connection, and serves from the nearest global location. This is what allows a site this visually heavy to load quickly.	USD 10 / month USD 120 / year	Billed separately to be set up in your name
thescentpair.com Primary domain + ID protection	The main address of the website, worldwide.	NGN 14,999 / year + NGN 9,000 ID protection	Paid — registered
thescentpair.com.ng Nigerian domain + ID protection	Local address, redirected to the primary domain. Protects the brand name in Nigeria.	NGN 3,000 / year + NGN 9,000 ID protection	Paid — registered
Hosting Where the site lives	Global delivery, automatic secure certificate, no server to manage. A site of this size and traffic level sits comfortably within the free tier of the recommended platform.	NGN 0 from ~USD 20/mo if outgrown	Included in build
Business email (optional) hello@thescentpair.com	Branded email on your own domain. A free option is available and adequate; the paid option adds calendar, storage and better deliverability.	NGN 0 — free tier or ~USD 6/user/mo	Your choice
Mailing list (optional)	Collecting and sending to your list. Free up to roughly 500–1,000 subscribers on the major platforms.	NGN 0 to start	Free at launch

ALREADY PAID — DOMAIN REGISTRATION

Both domains are registered and attached, at a documented total of **NGN 38,698.93** — NGN 35,999.00 for the two domains and ID protection on both, plus NGN 2,699.93 in VAT at 7.5%. Nothing further is due on the domains until renewal, twelve months from registration.

C · What it costs to keep, per year

RECURRING ITEM	ANNUAL (INDICATIVE)
Cloudinary media delivery — USD 120	NGN 180,000 – 198,000
thescentpair.com renewal + ID protection	NGN 23,999
thescentpair.com.ng renewal + ID protection	NGN 12,000
Hosting — free tier	NGN 0
Business email — free tier	NGN 0
Approximate annual running cost	NGN 216,000 – 234,000

SECTION 03

Scope, Inclusions and Boundaries

Said plainly now, so there is nothing to discover later.

INCLUDED

In this phase

Everything in Sections 03, 04 and 05 of the proposal: seven designed and built pages, ten animated moments with mobile and reduced-motion variants, the product and pair system, filtering, WhatsApp ordering, enquiry form, mailing-list capture, Cloudinary media pipeline, search and social setup, analytics, cross-device testing, domain connection, launch, a training session, and written handover documentation.

INCLUDED

Content at launch

Loading of up to twelve individual fragrances and six pairs, three Stories articles, and all standing page copy. Editing and shaping of the descriptions you provide is included; writing them from nothing is not.

NOT INCLUDED

Media production

Photography and videography are not included. We will provide the full shot list, creative direction and specifications, and can brief and manage a production team on your behalf – quoted separately as a production cost.

NOT INCLUDED

Phase 2 – card checkout

Cart, card payment through Paystack or Flutterwave, order confirmation emails, stock management and an order dashboard. The site is built ready for it. Indicatively 35–45% of the one-off build total in Section 02(A), when you want it.

NOT INCLUDED

Ongoing marketing

Social media management, paid advertising, influencer work, and writing new Stories articles after launch. Available separately if useful.

NOT INCLUDED

Third-party costs

Cloudinary, domain renewals, any paid email or mailing-list plan, and stock or licensed imagery. Payable directly by you, at cost, with no mark-up.

REVISIONS

Two full rounds of revision are included at each of the three gates – visual direction, design, and motion. That is generous and, in practice, sufficient. Changes requested after Gate 3 that alter agreed scope – new pages, new animated moments, a change of direction on something already approved – are quoted as additions before any work begins, so there are never unexpected charges.

Aftercare, Ownership and Next Steps

What happens after launch, what belongs to you, and how we start.

The first thirty days

Included at no additional cost. Any defect — something not working as specified, on any supported device or browser — is fixed without charge. This is not a trial period on the work; it is simply how the work ends properly.

Ongoing support, if you want it

OPTION A

As needed

Nothing monthly. Changes and additions quoted individually as they come up. Suits you if updates are occasional.

OPTION B

Monthly care

A fixed monthly fee covering product and price updates, new Stories articles, dependency and security updates, monthly performance and traffic reporting, and priority response.
..... / month.

OPTION C

Growth partner

Monthly care plus continuing design and development time each month for new features, seasonal campaigns and expansion of the range. / month.

What belongs to you

On final payment, everything: the design files, the complete source code, the content, and the accounts. Cloudinary, hosting, analytics and the domains are all set up in **your** name with **you** as owner, and we are added as collaborators — not the other way round. You can remove that access at any moment and the site keeps running. You will never be in a position where you cannot get to your own website.

Training and documentation

A recorded walkthrough session, plus a written handover covering how to change a price, add a fragrance, publish a Story, replace an image, read your analytics, and who to contact for what. Written for someone who does not write code.

To begin

1. **Confirm the scope** in this document, and the figures in Section 02.
2. **Decide the media route** from Section 06 of the concept document — you produce it, we manage production, or we launch on placeholders and swap.
3. **Sign below** and settle the opening 50%.
4. **Book the discovery session** — ninety minutes, in person or on a call.
5. **Week 1 begins** the next working day.

Signature scents, made for two.

LET'S BUILD THE WEBSITE THAT DESERVES IT

SIGNED — FOR HIS & HER'S SCENTS

DATE

SIGNED — FOR THE STUDIO

DATE

This proposal is valid for 30 days from the date on the cover. Third-party rates quoted are those published by the providers at the time of writing and are subject to change by those providers. Naira equivalents of dollar-priced services are indicative and will vary with the exchange rate.

PART THREE

The Specification

Architecture, animation engineering, media pipeline, budgets and launch criteria. Written for whoever builds and maintains the site.

Contents

- 01 Scope, Constraints & Definition of Done
What ships, what does not, and what counts as finished
-

- | | |
|----|---|
| 02 | Stack Selection
Three viable routes, scored, with a recommendation |
| 03 | Information Architecture & Routing
Route table, URL rules, redirects |
| 04 | Design Tokens
Colour, type, spacing, easing, z-index, breakpoints |
| 05 | Content Model

Domains, records, environment variables, secrets |
| 15 | QA Matrix & Launch Checklist
Devices, browsers, conditions, sign-off gates |
| 16 | Phase 2 — Commerce Readiness
Decisions to make now so nothing is rebuilt later |
| 17 | Handover Deliverables
What is packaged and where it lives |

Scope, Constraints & Definition of Done

Read alongside the client proposal. Where the two conflict, the client proposal governs commercial scope and this document governs implementation.

IN SCOPE — PHASE 1

- Seven routes, statically rendered, fully responsive from 320 px to 2560 px
- Ten named animation moments, each with a designed mobile variant and a `prefers-reduced-motion` fallback
- Product catalogue driven by structured content, not hard-coded markup — a price change must be a one-line data edit
- Scroll-driven bottle rotation from an image sequence hosted on Cloudinary
- Scroll-scrubbed hero video with a poster-frame fallback and a hard mobile data ceiling
- WhatsApp deep-link ordering with a pre-composed, URL-encoded message
- Enquiry form and mailing-list capture, both with spam protection and no server of our own
- Full metadata, Open Graph and Twitter cards, `Product` and `Organization` JSON-LD, sitemap, robots
- Analytics with the named event taxonomy in Section 13

EXPLICITLY OUT OF SCOPE — PHASE 1

- Cart, checkout, payment gateway, order persistence, stock decrementing, transactional email
- User accounts, wishlists, reviews
- A CMS admin UI. Content is edited as versioned data files (see Section 05) unless a headless CMS is chosen at kick-off
- Multi-currency and multi-language
- Media production. Assets arrive per the client-side shot list

DEFINITION OF DONE — A FEATURE IS NOT FINISHED UNTIL ALL OF THE FOLLOWING ARE TRUE

- ☐ Renders correctly at 320, 390, 768, 1024, 1440 and 1920 px
- ☐ Behaves correctly under `prefers-reduced-motion: reduce`
- ☐ Keyboard reachable, with a visible focus ring, in a sensible tab order
- ☐ No layout shift after load — every media box has intrinsic dimensions reserved
- ☐ Passes the Section 10 budget on a throttled Fast 3G / 4× CPU profile
- ☐ No console errors or warnings
- ☐ Animation cleans up on unmount — no orphaned ScrollTriggers, RAF loops, observers or listeners

THE ONE CONSTRAINT THAT SHAPES EVERY DECISION

This is a visually maximal site for an audience that is predominantly on mid-range Android over Nigerian mobile data. Those two facts pull in opposite directions and reconciling them is the actual engineering problem — not the animation itself. Every technique in Section 07 and Section 10 exists to serve that reconciliation. When in doubt: **ship the drama on capable devices, degrade gracefully everywhere else, and never let the first paint wait on a decorative asset.**

SECTION 02

Stack Selection

Three defensible routes. Pick one at kick-off; do not mix.

CRITERION	A · NEXT.JS (APP ROUTER)	B · ASTRO	C · VANILLA / VITE
Rendering	SSG for all seven routes; ISR available later	SSG, zero JS by default, islands where needed	Static build, hand-managed
JS shipped	Moderate — React runtime baseline	Lowest — only island JS	Lowest — only what you write
Animation fit	Excellent. GSAP + ScrollTrigger, Framer Motion for component transitions	Excellent. GSAP in a script tag or island; no framework overhead fighting the timeline	Excellent, and the most direct control
Phase 2 commerce	Strongest — API routes, server actions, webhooks all native	Good — needs an adapter and server output mode	Weakest — requires bolting on a backend
Content editing	MDX / JSON, or any headless CMS	Content collections with schema validation — best in class	Hand-edited JSON
Maintainability by others	High — largest talent pool	Medium — smaller pool	Low — bespoke
Time to build	Baseline	~5–10% faster for this scope	~15% slower once responsive and state work is counted

RECOMMENDATION

Route A — Next.js App Router, on the grounds of Phase 2 rather than Phase 1. Astro would produce a marginally leaner Phase 1, but card checkout, webhooks and order handling are a known and dated requirement, and Next absorbs that without a migration. Choose Astro instead only if Phase 2 is genuinely uncertain. Do not choose Route C for this project — a ten-moment animation system with a filterable catalogue needs component state, and hand-rolling it costs more than the framework does.

RECOMMENDED DEPENDENCY SET — ROUTE A

FRAMEWORK	<code>next</code> (App Router, TypeScript strict) — static export where possible
STYLING	<code>tailwindcss</code> with the Section 04 tokens declared as CSS custom properties and mapped into the Tailwind theme. No component library — every surface is bespoke.
SCROLL ANIMATION	<code>gsap</code> + <code>ScrollTrigger</code> . The scrub, pin and timeline model is the correct tool for Moments 03, 06, 07 and 09. Do not attempt these with <code>IntersectionObserver</code> alone.
COMPONENT MOTION	<code>framer-motion</code> for enter/exit, layout transitions and the filter re-flow on the Collection route. Keep it out of scroll-scrub work — the two systems should not both own the same element.
SMOOTH SCROLL	<code>lenis</code> , integrated with <code>ScrollTrigger</code> via <code>ScrollTrigger.scrollerProxy</code> and <code>lenis.on('scroll', ScrollTrigger.update)</code> . Disable on touch (<code>smoothTouch: false</code>) — hijacked scroll on mobile is a defect, not a feature.
PARTICLES	Hand-written 2D canvas for Moment 04. No particle library — the requirement is roughly 120 lines and every library is heavier than the effect.
MEDIA	<code>next-cloudinary</code> for <code>CldImage</code> / <code>CldVideoPlayer</code> , or hand-built URLs per Section 08. Prefer hand-built URLs for the turntable sequence — the abstraction gets in the way.
FORMS	A serverless form endpoint (Formspree, Basin, or a Next route handler posting to Resend). Honeypot field plus time-to-submit check; add Turnstile only if abuse appears.
ANALYTICS	Plausible or Umami — cookieless, lightweight, no consent banner required in most readings. GA4 only if the client specifically needs it.
HOSTING	Vercel (free tier is sufficient at launch traffic) or Netlify. Cloudflare in front only if a WAF is wanted; it is not required.

LICENSING NOTE

GSAP's core and `ScrollTrigger` are free for commercial use under the standard licence. If the build reaches for a Club plugin — `SplitText` for Moment 09, `DrawSVGPlugin` for Moments 01 and 05, `MorphSVG` — confirm the licence position at kick-off and budget for it, or implement the equivalents by hand. Both of those particular effects are achievable without plugins: text splitting with a small utility over `Intl.Segmenter`, and SVG line drawing with `stroke-dasharray` / `stroke-dashoffset`. Verify current licence terms before relying on this paragraph.

Information Architecture & Routing

ROUTE	RENDERING	PURPOSE & NOTES
/	Static	Home. Moments 01, 02, 03, 04, 06, 07, 08 (featured), 10.
/collection	Static	All fragrances. Filter state in the URL as a query string so filtered views are shareable: <code>?for=his&family=woody</code> .
/fragrance/[slug]	Static, generated per item	Product page. Moments 03, 04, 05, 10. Renders the partner-fragrance module when <code>pairId</code> is present.
/pairs	Static	Index of pairs.
/pairs/[slug]	Static, generated per item	Pair page. Moment 07 at full screen, plus the shared-accord diagram.
/story	Static	Brand story. Moment 09.
/stories / /stories/[slug]	Static, generated per item	Editorial index and article. The SEO surface that grows over time.
/contact	Static	Enquiry form, channels, FAQ accordion.
/legal/privacy , /legal/terms	Static	Required for ad platforms and mailing-list compliance. Do not skip.
/_not-found	Static	Branded 404 on black, with the monogram and a route back to the Collection.

URL AND REDIRECT RULES

- Slugs: lowercase, hyphenated, no dates, never renamed after launch. If one must change, add a permanent redirect.
- `thescentpair.com.ng` → **308** to `https://thescentpair.com`, preserving path. Configured at the DNS/host layer, not in application code.
- `www` → apex, 308. Pick apex as canonical and set `<link rel="canonical">` accordingly on every route.
- Enforce HTTPS and HSTS. Trailing-slash behaviour set once in config and never mixed.

Design Tokens

Declare once as CSS custom properties on `:root`, map into the Tailwind theme, and never hard-code a hex value in a component.

COLOUR

```
--onyx-900: #0B0A09; /* page ground, section grounds */
--onyx-800: #16130F; /* raised surfaces, cards on black */
--onyx-700: #221D17; /* hairline borders on black */
--gold-500: #B08D3A; /* primary accent, rules, active state */
--gold-300: #D9BC6A; /* text on black, particle fill */
--gold-100: #F0E2B8; /* highlight tips, specular */
--gold-700: #8A6C22; /* accent on light grounds (contrast) */
--parchment: #F6F2EA; /* light sections, product grid ground */
--paper: #FDFCFA; /* light cards */
--ink-900: #17140F; /* text on light */
--ink-600: #4A4238; /* secondary text on light */
--his-500: #1B2430; /* His world grade */
--hers-500: #7C4A45; /* Her's world grade */

/* Foil gradient – headline fill only, never on body text */
--foil: linear-gradient(100deg, #8A6C22 0%, #E8CE86 28%,
  #FFF3CE 46%, #D9BC6A 62%, #8A6C22 100%);
```

Contrast: `--gold-300` on `--onyx-900` clears 4.5:1 for body text. `--gold-500` on `--onyx-900` does not — restrict it to large text, rules and non-text UI. On light grounds use `--gold-700`, never `--gold-300`. Verify every pairing with a checker before sign-off rather than trusting these notes.

TYPE

DISPLAY	A high-contrast serif in the register of the logo lettering — Cormorant Garamond, Playfair Display or Italiana. Weights 400/600 only. Subset to Latin; self-host as <code>woff2</code> with <code>font-display: swap</code> and a preload for the single face used above the fold.
BODY / UI	A geometric sans — Poppins, Jost or Outfit. Weights 300/400/500 only.
SCALE	<code>clamp()</code> throughout. Display: <code>clamp(2.25rem, 7vw, 6.5rem)</code> . H2: <code>clamp(1.75rem, 4vw, 3.25rem)</code> . Body: <code>clamp(0.95rem, 1.05vw, 1.0625rem)</code> . Never a fixed <code>px</code> font size.
TRACKING	Display <code>-0.02em</code> . Eyebrow / label <code>0.28em</code> , uppercase, small. Body <code>0</code> .
MEASURE	Body copy capped at <code>68ch</code> . Editorial pull-quotes at <code>44ch</code> .

SPACE, RADIUS, ELEVATION

SPACE SCALE	<code>4 / 8 / 12 / 16 / 24 / 32 / 48 / 64 / 96 / 128 / 192 px</code> . Section vertical rhythm: <code>clamp(96px, 12vh, 192px)</code> .
GUTTER	20 px at mobile, <code>clamp(24px, 5vw, 96px)</code> above. Content max-width 1440 px; full-bleed moments ignore it.
RADIUS	0 or 2 px only. Luxury reads as sharp. Exception: pill-shaped buttons at <code>999px</code> .
ELEVATION	No drop shadows on black. Depth comes from a 1 px <code>--onyx-700</code> border plus an inner gold hairline at 12% opacity. On light grounds, one shadow token only.

MOTION TOKENS — USE THESE, DO NOT INVENT NEW ONES

```
--dur-instant: 120ms; --dur-fast: 240ms;
--dur-base: 420ms; --dur-slow: 720ms;
--dur-cine: 1200ms; --dur-epic: 2400ms;

--ease-out-soft: cubic-bezier(0.16, 1, 0.30, 1); /* default reveal */
--ease-in-out-lux:cubic-bezier(0.65, 0, 0.35, 1); /* two-way moves */
--ease-glass: cubic-bezier(0.22, 1, 0.36, 1); /* bottle drift */
--ease-mask: cubic-bezier(0.83, 0, 0.17, 1); /* wipes, curtains*/

--stagger-tight: 60ms; --stagger-base: 110ms; --stagger-loose: 180ms;
```

Z-INDEX LADDER

0 content · 10 sticky nav · 20 particle canvas · 30 pinned sections · 40 drag handle (Moment 07) · 60 custom cursor · 80 mobile menu · 100 preloader. Declared as tokens; no arbitrary values.

BREAKPOINTS

sm 480 · md 768 · lg 1024 · xl 1440 · 2xl 1920 . Design mobile-first; the animation tier switch is capability-based, not width-based (Section 07).

SECTION 05

Content Model

Content lives in typed, validated data files. This is what makes Phase 2 an addition rather than a rewrite.

Store as MDX or JSON under `/content`, validated at build time with Zod (or Astro content collections if Route B). Fields marked † are consumed by the Phase 2 cart and must be present from day one even though nothing reads them yet.

FRAGRANCE

```
{

```

TWO RULES THAT PROTECT PHASE 2

Prices are integers in minor-unit-free Naira, never strings, never formatted. Format at render. A price stored as "N45,000" cannot be summed by a cart, cannot be sent to a gateway, and cannot be put in structured data.

Every purchasable thing has a SKU from day one. Retrofitting SKUs after launch means rewriting every WhatsApp reference code and breaking every order record the client has kept.

SECTION 06

Component Inventory

GLOBAL

PRELOADER	Moment 01. <code>sessionStorage</code> flag — full sequence once per session, 400 ms cross-fade thereafter. Hard 2.5 s timeout: reveals regardless of asset state.
NAV	Transparent over the hero; acquires an <code>--onyx-900</code> ground at 88% with backdrop blur past 80 vh. Hides on scroll down, returns on scroll up. Mobile: full-screen overlay, staggered link reveal, focus trapped, <code>Esc</code> closes, background scroll locked.
SILLAGECANVAS	Moment 04. Fixed, <code>pointer-events:none</code> , <code>z 20</code> . Mounted only on Tier A (Section 07). Pauses on <code>document.hidden</code> and when no motion has occurred for 3 s.
CURSOR	Custom gold ring with label state (<i>Discover, Drag, Rotate</i>). Pointer-fine only; never mounted on touch.
FOOTER	Moment 10. Gold fill line on scroll-into-view, breathing monogram (CSS <code>opacity</code> keyframe, 6 s), tagline, mail capture, channels, legal links.
ORDERBUTTON	Section 09. Accepts <code>fragrance</code> or <code>pair</code> plus selected variant. Renders as <code><a></code> with a real <code>href</code> — must work with JS disabled and be long-pressable.
SECTIONREVEAL	The workhorse wrapper. Mask-wipe or rise-and-fade on enter, once only, with configurable stagger. Every non-hero section uses it.

HOME

HEROMEETING	Moment 02. Two bottle layers plus a light-seam layer; wordmark masked reveal; scroll cue.
TURNTABLESCRUB	Moment 03. Pinned, scrub-linked frame sequence. Detailed in Section 07.
RITUALFILM	Moment 06. Pinned full-bleed video, scrub-linked <code>currentTime</code> . Poster-first, tiered source selection.
SPLITWORLD	Moment 07. Pointer/touch/keyboard-draggable divider, clip-path driven, spring return to 50%.
FEATUREDPAIRS	Three pair cards, Moment 08 reveal, magnetic hover.
STORYTEASE	Two paragraphs of Moment 09 treatment plus a link to <code>/story</code> .

COLLECTION & FRAGRANCE

FILTERBAR	Facets for <i>for</i> and <i>family</i> . Writes to the URL query. Result count announced via <code>aria-live="polite"</code> . Grid re-flows with a Framer Motion layout animation, 240 ms.
FRAGRANCECARD	Moment 08. Gold mask wipe in, magnetic lift on hover (max 8 px translate, 1.02 scale), cursor label. Reserved aspect box — zero CLS.
NOTESPYRAMID	Moment 05. Inline SVG radial diagram, <code>stroke-dashoffset</code> draw-on, per-note hover/tap detail panel. Fully keyboard navigable: each note is a <code><button></code> .
PERFORMANCEMETERS	Longevity / sillage / projection as gold hairline bars, width animated on enter. <code>role="img"</code> with a text label — never bars alone.
VARIANTSELECT	Size and quantity. Radio-group semantics. Updates the price display and the OrderButton payload.
PARTNERMODULE	Rendered when <code>pairId</code> is set. Shows the partner bottle, draws an animated connector between the shared base notes, and offers the pair set.

SECTION 07

Animation Specification

The ten moments, implementation-level. Trigger, mechanism, timing, fallback and cost.

The capability tier system

Resolve once on mount, expose via context, and gate every moment on it. Tier is a capability judgement, not a screen-width judgement — a 1440 px window on a throttled machine should get Tier B.

```

tierA // full: particles, video scrub, 36-frame turntable, custom cursor
tierB // reduced: 18-frame turntable, video autoplay-loop (no scrub),
      //         no particles, no custom cursor
tierC // static: posters and stills, CSS transitions only

// Inputs, in priority order:
// 1. prefers-reduced-motion: reduce      → tierC (hard override)
// 2. navigator.connection.saveData === true → tierC
// 3. effectiveType 'slow-2g' | '2g' | '3g' → tierB
// 4. navigator.deviceMemory < 4          → tierB
// 5. navigator.hardwareConcurrency <= 4  → tierB
// 6. matchMedia('(pointer:coarse)')      → no cursor, touch variants
// 7. otherwise                           → tierA
// Treat every one of these APIs as optional – feature-detect, default to tierB
// when unknown, and re-evaluate on 'change' of the reduced-motion query.

```

01

The Overture — preloader

TRIGGER	Mount, gated on <code>sessionStorage.hhs_seen</code>
MECHANISM	Inline SVG monogram, single path. <code>stroke-dasharray = pathLength</code> , animate <code>stroke-dashoffset</code> to 0. Then bottle silhouette <code>opacity + scale(1.04 → 1)</code> . Then a full-viewport <code>clip-path: inset()</code> curtain lift on the overlay.
TIMING	Draw 900 ms <code>--ease-out-soft</code> → silhouette 500 ms (overlap 200 ms) → hold 200 ms → curtain 700 ms <code>--ease-mask</code> . Total ~2.1 s.
HARD RULE	A 2.5 s <code>setTimeout</code> forces reveal regardless of asset load state. The preloader must never be able to trap a visitor.
FALLBACK	Tier C: static monogram, 300 ms fade. Returning session: 400 ms fade, no draw.
COST	Inline SVG only. Must add zero network requests.

02

The Meeting — hero

TRIGGER	Immediately after the Overture curtain, on a GSAP timeline
MECHANISM	Two transparent PNG/AVIF bottle layers from <code>x: ±60vw</code> , <code>rotate: ±6deg</code> , <code>opacity 0</code> to rest, <code>--ease-glass</code> . Specular highlight is a separate <code>mix-blend-mode: screen</code> layer with a masked <code>background-position</code> sweep. Light seam: a 2 px gold element scaling <code>scaleY(0 → 1)</code> from centre with a <code>blur(12px)</code> duplicate behind at 40% opacity. Wordmark reveals via <code>clip-path: inset(0 0 100% 0 → 0)</code> .
TIMING	Bottles 1400 ms, stagger 120 ms → seam 600 ms at -300 ms overlap → wordmark 700 ms → tagline 500 ms → scroll cue 400 ms. Total ~3.4 s.
MOBILE	Bottles enter from top and bottom rather than left and right; travel reduced to 30 vh. Type scale drops one step.
FALLBACK	Tier C: composed still at final state, 400 ms fade.
COST	Two hero images inside the LCP budget — AVIF with WebP fallback, <code>fetchpriority="high"</code> , preloaded, combined ≤ 180 KB at 1x.

03

The Unveiling — scroll-scrubbed turntable

TRIGGER	ScrollTrigger, pin: true, scrub: 1, end: "+=180%"
MECHANISM	36 pre-decoded frames drawn to a single <code><canvas></code> — not 36 stacked <code></code> elements, which thrash the compositor. Map <code>self.progress</code> to a frame index, <code>Math.round</code> , and only redraw when the index changes. Draw inside <code>requestAnimationFrame</code> , one draw per frame maximum.
PRELOAD	All frames requested when the section is within 1.5 viewports (a wider-margin IntersectionObserver). Show frame 1 as a static poster until <code>decode()</code> resolves for every frame; only then attach the ScrollTrigger. Use <code>img.decode()</code> , not <code>onload</code> — decoding is where the jank lives.
EXTRAS	Cap lift keyed to <code>progress > 0.82</code> . Engraving label cross-fades in across <code>progress 0.44 → 0.56</code> as the front face passes.
TIER B	18 frames (every second frame), same scrub. Tier C: single hero still, no pin, no scrub.
COST BUDGET	36 frames × ≤ 26 KB = ≤ 950 KB total , AVIF, 1200 px on the long edge, quality tuned per frame. Tier B ≤ 480 KB. Never in the initial bundle — always lazily fetched.
WATCH FOR	iOS Safari pin + <code>100vh</code> : use <code>100dvh</code> and re-run <code>ScrollTrigger.refresh()</code> on <code>orientationchange</code> and on <code>visualViewport</code> resize, debounced.

04

The Sillage — ambient particle field

TRIGGER	Tier A only. Pointer movement, scroll velocity, and section-change bursts.
MECHANISM	Single 2D canvas, DPR-capped at 2. Object-pooled particles — allocate once, recycle, never create in the loop. Per particle: position, velocity, life, size 0.6–2.4 px, radial gold gradient, <code>globalCompositeOperation = 'lighter'</code> . Emit on pointer move with a 16 ms throttle; add upward drift plus slight horizontal noise.
CAPS	Maximum 140 live particles. Suspend the RAF loop when <code>document.hidden</code> , when the canvas is out of view, and after 3 s of no input. If a rolling 60-frame average drops below 50 fps, halve the cap; below 40 fps, unmount and drop to Tier B for the session.
MOBILE	Scroll-velocity emission only, cap 60, no pointer trail.
FALLBACK	Tiers B and C: not mounted. A static, very faint radial gold vignette stands in.

05

The Notes — interactive pyramid

TRIGGER	ScrollTrigger enter (once) for the draw; pointer and keyboard for the detail state
MECHANISM	Inline SVG. Connector lines drawn with <code>stroke-dasharray / stroke-dashoffset</code> , staggered 110 ms outward from the bottle. Note labels rise and fade behind the line arrival. Selecting a note: ingredient image scales <code>0.94 → 1</code> with a <code>clip-path: circle()</code> bloom, all other notes drop to 35% opacity, the selected connector thickens to 1.5 px and brightens to <code>--gold-100</code> .
TIMING	Draw 700 ms per line, total ~1.6 s. Detail transition 320 ms <code>--ease-out-soft</code> .
AI1Y	Each note is a real <code><button></code> with <code>aria-pressed</code> . Arrow keys move between notes; the detail panel is <code>aria-live="polite"</code> . Ingredient images carry meaningful <code>alt</code> .
FALLBACK	Tier C: fully drawn diagram, no animation; tap still opens the detail panel with no transition.
COST	Ingredient images 480 px square, AVIF, ≤ 18 KB each, lazy, loaded on first interaction — not on section enter.

06

The Ritual — scroll-scrubbed film

TRIGGER	ScrollTrigger, <code>pin: true</code> , <code>scrub: 0.8</code> , <code>end: "+=140%"</code>
MECHANISM	Tier A: <code><video muted playsInline preload="none" poster=...></code> , scrub by setting <code>currentTime = progress * duration</code> , but only after <code>readyState ≥ 3</code> and throttled to once per animation frame. Assigning <code>currentTime</code> on every scroll event is the classic cause of iOS stutter here.
FALLBACKS	Tier B: no scrub — <code>autoplay muted loop</code> , started on intersection, paused on exit. Tier C: poster image only, with a play button that opens the clip in a lightbox on demand.
ENCODING	Cloudinary renditions per Section 08. Scrub source is a short, high-keyframe-density file — keyframe interval 6–12 frames, which is what makes seeking responsive. Ceiling: 25 s, ≤ 2.4 MB, 1080 px wide. Mobile rendition 720 px, ≤ 1.2 MB.
AUDIO	None. Muted always. No autoplay-with-sound under any condition.
WATCH FOR	iOS requires <code>playsinline</code> and a user-gesture-free muted start; low-power mode blocks autoplay entirely, so the poster path must genuinely look finished on its own.

07

Two Halves — draggable split world

TRIGGER	Pointer drag, touch drag, or arrow keys on the focused handle
MECHANISM	Two absolutely positioned full-bleed layers. Reveal driven by <code>clip-path: inset(0 calc(100% - var(--split)) 0 0)</code> on the His layer, mirrored on Her's. Drive <code>--split</code> from pointer <code>x</code> ; write it with a <code>quickSetter</code> and update inside a single RAF — never on the raw pointer event. Gold divider translates with it, plus a soft glow duplicate. Release springs back to 50% over 700 ms <code>-ease-in-out-lux</code> . Copy on each side cross-fades past thresholds at 0.3 and 0.7.
A11Y	The handle is a <code>role="slider"</code> with <code>aria-valuenow</code> , <code>aria-valuetext</code> ("60% Her's"), and arrow-key steps of 5%. Both halves' text content is in the DOM at all times — never inserted on drag — so screen readers and search engines see everything.
MOBILE	Touch drag with a persistent hint chevron and a one-time 600 ms auto-nudge to 58% on first view to teach the affordance. <code>touch-action: pan-y</code> on the handle so vertical page scroll is never captured.
FALLBACK	Tier C: static 50/50 split, no drag, both halves fully legible.
WATCH FOR	Animate <code>clip-path</code> and <code>transform</code> only. Animating <code>width</code> here forces layout on every frame and will drop frames on mid-range Android.

08

The Reveal — grid wipe and magnetic hover

TRIGGER	<code>ScrollTrigger.batch</code> , once per card; pointer for hover
MECHANISM	Wipe: a gold-gradient overlay sweeps across the card via <code>transform: translateX</code> while the card image animates <code>clip-path: inset(0 0 100% 0 → 0)</code> and <code>scale(1.06 → 1)</code> . Batch in rows with <code>--stagger-base</code> . Magnetic hover: <code>translate</code> the card up to 8 px toward the pointer, eased 0.12 per frame, plus <code>scale(1.02)</code> ; reset on leave.
TIMING	Wipe 820 ms <code>-ease-mask</code> , stagger 110 ms. Hover follow is continuous, damped.
FALLBACK	Tier B: fade and rise, 420 ms, no wipe, no magnetism. Tier C: no entrance animation.
WATCH FOR	Use <code>ScrollTrigger.batch</code> , not one trigger per card — a 30-item grid with individual triggers measurably degrades scroll performance.

09

The Letter — scroll-revealed typography

TRIGGER	<code>ScrollTrigger</code> per block, <code>scrub: true</code> across a short range
MECHANISM	Split into lines (<code>SplitText</code> , or a hand-rolled splitter). Each line inside an <code>overflow:hidden</code> wrapper, animating <code>y: 110% → 0</code> with <code>opacity 0 → 1</code> , stagger 60 ms. Emphasis words are wrapped in a span carrying the <code>--foil</code> background clip, revealed by an <code>inset clip-path</code> sweep.
A11Y	Split the text <i>after</i> hydration and preserve the original string in the DOM structure. Never ship pre-split, one-span-per-word markup as the source — it destroys screen-reader reading and text selection. If the splitter has not run, the paragraph must still read normally.
FALLBACK	Tier C: no split, no animation, emphasis words in flat <code>--gold-300</code> .
WATCH FOR	Re-split on resize past a breakpoint, and re-split after webfonts settle — measuring lines before <code>document.fonts.ready</code> produces wrong line boxes.

10

The Close — footer

TRIGGER	ScrollTrigger enter, once
MECHANISM	Gold rule <code>scaleX(0 → 1)</code> from left, 1200 ms <code>--ease-out-soft</code> . Monogram breathes on an infinite CSS keyframe — <code>opacity .55 → .9 → .55</code> over 6 s — paused under reduced motion and when off-screen.
FALLBACK	Tier C: rule at full width, monogram static.

ANIMATION ENGINEERING RULES — ENFORCE IN REVIEW

1. Animate only transform, opacity, clip-path and filter. Never width, height, top, left, margin or background-position on a scroll-linked property.
2. Apply `will-change` immediately before an animation and remove it on completion. Leaving it on permanently creates compositor layers that cost more than they save.
3. Every ScrollTrigger, RAF loop, observer and listener is killed in cleanup. Route changes must not leak.
4. One RAF loop for the whole application, driven by GSAP's ticker. Not one per component.
5. Read layout once, write many — never interleave `getBoundingClientRect` with style writes inside a loop.
6. Call `ScrollTrigger.refresh()` after fonts load, after images settle, and on debounced resize. Most “the pin is in the wrong place” bugs are a missing refresh.
7. Verify every moment on a real mid-range Android device, not only in a throttled desktop emulator.

SECTION 08

Cloudinary Architecture

Account in the client's name from day one, with the developer as a collaborator. Never the reverse.

FOLDER STRUCTURE — FIXED AT SETUP, SINCE PUBLIC IDS ARE REFERENCED IN CONTENT

```
hhs/
├─ brand/           logo-full · logo-mono · monogram-svg · og-default
├─ fragrance/<slug>/ hero-dark · hero-light · detail-cap ·
│                   detail-label · with-box
├─ pairs/<slug>/     hero · his · hers
├─ turntable/<slug>/ frame-001 ... frame-036
├─ notes/           bergamot · oud · rose · vanilla · amber · musk ...
├─ video/           ritual-master · ritual-scrub · ritual-loop
├─ stories/<slug>/   cover · inline-1 · inline-2
└─ og/              per-route social cards
```

UPLOAD PRESETS

HHS_PRODUCT	Eager: AVIF + WebP at 480/768/1200/1920 px. <code>q_auto:good</code> , <code>f_auto</code> . Strip EXIF. Overwrite off, unique filename off — public IDs must be stable and predictable.
HHS_TURNTABLE	Eager AVIF at 1200 px and 720 px. <code>q_auto:eco</code> — motion hides compression artefacts, so eco is the right trade here. Zero-padded three-digit sequence naming, enforced.
HHS_NOTE	480 px square, <code>c_fill,g_auto</code> , AVIF, <code>q_auto:eco</code> .
HHS_VIDEO	Eager renditions listed below. Always <code>an</code> (strip audio) — smaller files and no chance of an autoplay-sound violation.

TRANSFORMATION STRINGS — COPY THESE

```
# Responsive product hero (build srcset from the width list)
/image/upload/f_auto,q_auto:good,dpr_auto,w_1200,c_limit/hhs/fragrance/midnight-oath/hero-dark

# Low-quality placeholder — inline as a data URI at build time
/image/upload/f_auto,q_10,w_24,e_blur:400/hhs/fragrance/midnight-oath/hero-dark

# Turntable frame, Tier A (1200px) / Tier B (720px)
/image/upload/f_avif,q_auto:eco,w_1200,c_limit/hhs/turntable/midnight-oath/frame-014

# Note ingredient
/image/upload/f_auto,q_auto:eco,w_480,h_480,c_fill,g_auto/hhs/notes/oud

# Video — scrub source, high keyframe density for responsive seeking
/video/upload/f_mp4,vc_h264,q_auto:good,w_1080,c_limit,br_2m,ki_6,an/hhs/video/ritual-scrub

# Video — mobile loop
/video/upload/f_mp4,vc_h264,q_auto:eco,w_720,c_limit,br_900k,an/hhs/video/ritual-loop

# Poster frame, pulled from the master at 2.4s
/video/upload/so_2.4,f_avif,q_auto:good,w_1440/hhs/video/ritual-master.avif

# Social card, composited over the brand ground
/image/upload/w_1200,h_630,c_fill,g_auto,f_jpg,q_auto:good/hhs/og/home
```

Verify each transformation string against Cloudinary's current documentation before committing — parameter names and defaults do change, and `f_avif` support should be confirmed against the account's delivery settings.

DELIVERY DISCIPLINE

- **Never** reference an original asset without a transformation. An un-transformed URL serves the full-resolution upload and will wreck both the bandwidth budget and the Cloudinary quota.
- Use **named transformations** for anything appearing more than twice, so a global quality change is one dashboard edit rather than a code change.
- Enable **strict transformations** before launch so arbitrary URL parameters cannot be used against the account.
- Restrict delivery to the production and preview domains once DNS is live.
- Every image gets width and height attributes, or an `aspect-ratio` box. No exceptions — this is the whole of the CLS budget.
- Above-the-fold hero: `fetchpriority="high"`, `loading="eager"`, preloaded. Everything else: `loading="lazy"`, `decoding="async"`.
- Build-time LQIP data URIs for the hero and the first row of the grid. Nothing should ever appear as an empty box.

QUOTA DISCIPLINE — THE REASON THE \$10 PLAN IS ENOUGH

Cloudinary's paid entry tier is metered on credits, where a credit covers a bundle of storage, transformations and delivered bandwidth. The turntable sequence is the risk: 36 frames requested per visit, if generated on the fly and uncached, can consume transformation quota fast. Three mitigations, all mandatory: **eager-generate** every rendition at upload so nothing transforms on demand; use a **fixed set of widths** rather than continuous `w_auto`, so the CDN cache actually hits; and keep frame count at 36 for Tier A and 18 for Tier B rather than the 60–72 a stock turntable might tempt you toward. Confirm the current plan's published limits against Cloudinary's pricing page before launch, and set a usage alert at 70%.

SECTION 09

WhatsApp Order Flow

The order action is a plain link. It must work with JavaScript disabled, be long-pressable, and be copyable.

```
const buildOrderUrl = ({ phone, item, variant, qty, url }) => {
  const lines = [
    `Hello His & Her's Scents 🙌`,
    ``,
    `I'd like to order:`,
    `• ${item.name}${variant ? ` - ${variant.size}${variant.unit}` : ''}`,
    `• Quantity: ${qty}`,
    variant ? `• Price: ₦${variant.price.toLocaleString('en-NG')}` : null,
    `• Ref: ${variant?.sku ?? item.slug.toUpperCase()}`,
    ``,
    `Page: ${url}`,
    ``,
    `My name:`,
    `Delivery address:`,
    `Preferred delivery date:`,
  ].filter(Boolean).join('\n')

  return `https://wa.me/${phone}?text=${encodeURIComponent(lines)}`
}
// phone: full international format, digits only, no '+' — e.g. 2348012345678
```

PAIR ORDERS	Send the set SKU and set price, and list both fragrance names as sub-bullets. The client must be able to tell a pair order from two single orders at a glance.
REFERENCE CODES	Always the SKU. This is the client's only order identifier until Phase 2, so it has to be stable and unambiguous.
LENGTH	Keep the encoded message under ~1,500 characters. Some clients truncate longer prefills.
EMOJI	One, in the greeting. Encode as UTF-8 through <code>encodeURIComponent</code> and test on both iOS and Android WhatsApp before launch.
FALLBACK	If <code>wa.me</code> fails to open — desktop without WhatsApp installed — show a small panel with the number, a copy-to-clipboard button, and the composed message as selectable text.
TRACKING	Fire <code>order_intent</code> (Section 13) before navigation. This is the primary conversion metric of Phase 1 — getting it right matters more than any other event.
CONFIG	Phone number in one environment variable, referenced everywhere. It will change.

SECTION 10

Performance Budget

Measured on a mid-range Android profile: Fast 3G throttle, 4× CPU slowdown, cold cache.

METRIC	TARGET	HARD FAIL
Largest Contentful Paint	≤ 2.5 s	> 4.0 s
Interaction to Next Paint	≤ 200 ms	> 500 ms
Cumulative Layout Shift	≤ 0.05	> 0.10
Time to First Byte	≤ 600 ms	> 1.2 s
JS transferred, initial route	≤ 180 KB	> 260 KB
CSS transferred	≤ 40 KB	> 70 KB
Fonts, total	≤ 90 KB	> 140 KB
Above-fold images	≤ 250 KB	> 400 KB
Home, full page weight	≤ 2.2 MB	> 3.5 MB
Scroll frame rate, Tier A desktop	≥ 55 fps	< 45 fps
Scroll frame rate, Tier B mobile	≥ 45 fps	< 30 fps
Lighthouse Performance, mobile	≥ 85	< 70
Lighthouse Accessibility	100	< 95

Full page weight excludes the turntable sequence and the ritual video, which are lazily fetched below the fold and budgeted separately in Section 07. Measure with Lighthouse in CI plus one manual run on a real device per release.

HOW THE BUDGET IS MET

- Static generation for all seven routes; no server round-trip on navigation
- Route-level code splitting; GSAP plugins imported dynamically only in the components that use them
- The particle canvas, turntable canvas and video component all dynamically imported and mounted on intersection — never in the initial bundle
- Self-hosted, subset `woff2` fonts; one face preloaded; `size-adjust` tuned against the fallback to keep the swap invisible
- AVIF first with WebP fallback, fixed width set, explicit dimensions everywhere
- Long-cache immutable hashed assets; Cloudinary handles media caching at the edge
- No analytics or third-party script before first paint; all deferred
- Bundle analyser run at every release, with a hard CI gate on the JS budget

SECTION 11

Accessibility & Reduced Motion

Target WCAG 2.2 AA. On a heavily animated site this is where corners get cut, so it is specified explicitly.

NON-NEGOTIABLE

- ☐ `prefers-reduced-motion: reduce` forces Tier C globally, and is re-evaluated on change — not read once at boot
- ☐ All text meets 4.5:1, large text 3:1, and UI boundaries 3:1. Gold on black is the risk area — check every pairing, do not assume
- ☐ Visible focus indicator on every interactive element: a 2 px `--gold-300` ring with 2 px offset. Never `outline: none` without a designed replacement
- ☐ Full keyboard operability, including the split-world slider, the notes pyramid, filters, the mobile menu and the FAQ accordion
- ☐ Skip-to-content link as the first focusable element
- ☐ One `<h1>` per route, no skipped heading levels, landmark regions correct
- ☐ Meaningful `alt` on product and ingredient images; decorative layers get `alt=""` and `aria-hidden`
- ☐ No autoplaying audio. No content that flashes more than three times per second
- ☐ Filter results and split-world position announced through polite live regions
- ☐ Pinned sections must remain escapable by keyboard — a pin that traps `Tab` is a blocker, not a defect
- ☐ Touch targets at least 44×44 px
- ☐ Forms: real `<label>` elements, `aria-describedby` for hints, errors announced and programmatically associated
- ☐ Tested with VoiceOver on iOS and TalkBack on Android, not only with an automated checker

REDUCED-MOTION BEHAVIOUR, PER MOMENT

MOMENT	REDUCED-MOTION BEHAVIOUR
01 The Overture	Static monogram, 300 ms opacity fade, no draw, no curtain
02 The Meeting	Composed final still, cross-fade only
03 The Unveiling	Single hero still; section unpinned and normal-flow
04 The Sillage	Not mounted; static vignette
05 The Notes	Diagram fully drawn; detail panel switches instantly
06 The Ritual	Poster only; explicit play control opens the clip on request
07 Two Halves	Static 50/50, both halves fully legible; drag disabled
08 The Reveal	Cards present immediately; no wipe, no magnetism
09 The Letter	Text at rest, no split, flat gold emphasis
10 The Close	Rule at full width, monogram static

Tier C must be a complete, elegant, finished website — not a broken version of the real one. Build it deliberately and review it as its own deliverable.

SECTION 12

SEO, Metadata & Structured Data

TITLES	Home: His & Her's Scents — Signature Scents, Made for Two .Fragrance: {name} — {for} Eau de Parfum His & Her's Scents .Pair: {name} — His & Her's Pair ... Under 60 characters where possible.
DESCRIPTIONS	Hand-written per route, 140–160 characters, mentioning the notes and Nigerian delivery. Never generated from body copy.
CANONICAL	Absolute, on the apex domain, on every route. Filter query strings on /collection canonicalise to the bare path.
OPEN GRAPH	Per-route 1200×630 card generated from the Cloudinary og/ folder. og:type product on fragrance routes, article on stories, website elsewhere. twitter:card summary_large_image . Test in WhatsApp specifically — it is the primary sharing surface here and is fussier than the rest.
JSON-LD	Organization plus WebSite on Home. Product with Offer , priceCurrency: "NGN" , availability and brand on each fragrance and pair. Article on stories. BreadcrumbList on all deep routes. FAQPage on Contact.
SITEMAP / ROBOTS	Generated at build. Submit to Google Search Console and Bing Webmaster Tools at launch.
LOCAL SIGNAL	areaServed on the Organization schema, delivery locations named in Contact copy, and a Google Business Profile if the client has any physical presence.
GROWTH SURFACE	/stories is the route that will earn organic traffic. Internal-link every story to the fragrances it mentions and back.

Analytics & Event Taxonomy

Names are fixed here. Renaming an event after launch destroys the historical series.

EVENT	PROPERTIES	WHY IT MATTERS
order_intent	sku, item_slug, item_type, variant_size, qty, price, source_route	The primary conversion. Every other number is context for this one.
fragrance_view	slug, for, family, referrer_type	Which fragrances earn attention
turntable_engage	slug, rotation_pct, tier	Whether Moment 03 justifies its build and payload cost
split_drag	pair_slug, max_offset, input (pointer/touch/key)	Whether the signature mechanic is discovered
note_open	note_id, fragrance_slug	Which notes drive curiosity — useful for marketing copy
ritual_progress	pct (25/50/75/100), tier	Whether the film is watched or scrolled past
filter_apply	facet, value, result_count	How people actually shop the range
pair_upsell_click	from_slug, pair_slug	Whether the partner module converts singles into pairs
list_signup	placement	Growth of the owned audience
enquiry_submit	topic	Wholesale, gifting and bespoke demand
tier_assigned	tier, reason	What proportion of real visitors ever see Tier A — this should inform Phase 2 priorities
perf_degrade	from_tier, to_tier, fps_avg	Real-world evidence of where the animation budget is failing

Infrastructure, DNS & Environments

ACCOUNTS — ALL CREATED IN THE CLIENT'S NAME, DEVELOPER ADDED AS COLLABORATOR

- Domain registrar — already registered: `thescentpair.com` and `thescentpair.com.ng`, both with ID protection
- Cloudinary — USD 10/month plan, billed to the client directly
- Host — Vercel or Netlify, free tier at launch
- Git — private repository, client added as owner at handover
- Analytics — Plausible or Umami
- Email / mailing list — per the client's choice in the proposal

DNS — CONFIRM EXACT TARGET VALUES AGAINST THE HOST'S CURRENT DOCUMENTATION

HOST	TYPE	VALUE	NOTE
@	A / ALIAS	Host-provided apex target	Prefer ALIAS/ANAME if the registrar supports it
www	CNAME	Host-provided	308 to apex
@ (.com.ng)	A / ALIAS	Redirect service or host	308 to <code>https://thescentpair.com</code> , path preserved
@	MX	Email provider records	Do not remove when repointing the web records
@	TXT	SPF, plus DKIM and DMARC	Required for deliverability of enquiry and list mail
_acme-challenge	TXT	Issued during certificate provisioning	Usually automatic

Lower TTL to 300 s at least 24 hours before the cutover, then restore afterwards. Verify HTTPS, HSTS, the www redirect and the .com.ng redirect immediately after propagation.

ENVIRONMENTS

LOCAL	<code>.env.local</code> , never committed. <code>.env.example</code> committed with every key present and no values.
PREVIEW	Per-branch deploy URL. <code>noindex</code> header enforced — a preview deployment appearing in Google is a real and common incident.
PRODUCTION	Apex domain, main branch only, protected.
VARIABLES	<code>NEXT_PUBLIC_SITE_URL</code> , <code>NEXT_PUBLIC_WHATSAPP_PHONE</code> , <code>NEXT_PUBLIC_CLOUDINARY_CLOUD_NAME</code> , <code>NEXT_PUBLIC_ANALYTICS_DOMAIN</code> , <code>CLOUDINARY_API_KEY</code> , <code>CLOUDINARY_API_SECRET</code> , <code>FORM_ENDPOINT</code> , <code>NEWSLETTER_API_KEY</code> .
SECRETS	Cloudinary API secret and any mail keys are server-side only. Never behind a <code>NEXT_PUBLIC_</code> prefix. Signed uploads only, if uploads are ever exposed.
HEADERS	HSTS, <code>X-Content-Type-Options: nosniff</code> , <code>Referrer-Policy: strict-origin-when-cross-origin</code> , <code>Permissions-Policy</code> minimal, and a CSP permitting only self, the Cloudinary delivery host, the analytics host and the font source.

QA Matrix & Launch Checklist

DEVICE AND BROWSER MATRIX — EVERY ROW EXERCISED ON ALL TEN MOMENTS

CLASS	DEVICE / BROWSER	EXPECTED TIER	PARTICULAR RISK
iOS high	iPhone 14+ / Safari	A	Pin with <code>dvh</code> ; video scrub seek performance
iOS low	iPhone SE or 11 / Safari	B	Low-power mode blocking autoplay; memory pressure
Android high	Pixel or Galaxy S-series / Chrome	A	Particle frame rate
Android mid	Redmi / Tecno / Infinix class	B	The most important row in this table. Turntable decode cost, split-world drag smoothness
Android alt	Samsung Internet	B	AVIF support; smooth-scroll conflicts
Desktop	Chrome, Safari, Firefox, Edge — current	A	Firefox <code>clip-path</code> and blend-mode differences
Tablet	iPad / Safari	A	<code>pointer: coarse</code> at desktop width — touch variants must apply
Constrained	Fast 3G + 4× CPU throttle	B	Whole-budget verification
Reduced motion	OS setting enabled, any device	C	Tier C must look finished, not broken
Assistive	VoiceOver iOS, TalkBack Android, NVDA	—	Pyramid, slider, filters, menu

LAUNCH CHECKLIST

- ☐ All budgets in Section 10 met on the constrained profile
- ☐ Every moment verified at all three tiers on real hardware
- ☐ WhatsApp order link tested end to end from iOS and Android, prefill correct, emoji intact
- ☐ Every price and SKU in the content files reconciled against the client's own list, in writing
- ☐ Forms deliver to a real inbox; spam protection verified; success and error states designed
- ☐ Mailing-list signup confirmed arriving in the list platform
- ☐ Metadata and Open Graph cards previewed in WhatsApp, Instagram, X and LinkedIn
- ☐ Structured data passing Google's Rich Results test with no errors
- ☐ Sitemap and robots live; Search Console and Bing verified and sitemap submitted
- ☐ Analytics recording all Section 13 events with correct properties
- ☐ 404 page branded and linking onward
- ☐ HTTPS, HSTS, www redirect and .com.ng redirect all verified
- ☐ Preview deployments returning `noindex`
- ☐ Cloudinary strict transformations on, delivery domains restricted, usage alert set at 70%
- ☐ Lighthouse ≥ 85 performance and 100 accessibility on mobile, on the Home route
- ☐ No console errors or warnings on any route
- ☐ Client is owner on every account; developer access documented and revocable
- ☐ Repository handed over; `README` and the content-editing guide written and reviewed by the client
- ☐ Privacy policy and terms published and linked
- ☐ Backup of all original media held outside Cloudinary

Phase 2 — Commerce Readiness

Decisions to make during Phase 1 so that Phase 2 is additive.

DATA	Section 05 already carries <code>variants</code> , <code>sku</code> , integer <code>price</code> , <code>currency</code> and <code>inStock</code> . A cart reads these directly, with no migration.
CART	Client-side state persisted to <code>localStorage</code> under a versioned key, keyed by SKU. Build the mini-cart drawer as a component in Phase 2, but reserve its z-index and nav slot now.
PAYMENT	Paystack or Flutterwave, initialised server-side. Never trust a client-supplied amount — recompute the total on the server from the SKUs before initialising the transaction, and verify by webhook rather than by the browser redirect.
ORDERS	A lightweight store — Postgres, Supabase or similar. Write the order on webhook confirmation, not on redirect. Idempotency keyed on the gateway reference.
EMAIL	Transactional confirmations through Resend or Postmark, on the sending domain, with SPF, DKIM and DMARC already in place from Section 14.
STOCK	Phase 1 <code>inStock</code> is a manually maintained boolean. Phase 2 replaces it with a counter and a decrement on confirmed payment. Keep every read behind a single helper now so there is one place to change.
SHIPPING	Zone-based flat rates as data from the start — even in Phase 1, where they are only displayed on the Contact page.
KEEP WHATSAPP	Do not remove the WhatsApp path when checkout ships. Run both. A meaningful share of Nigerian buyers will continue to prefer the conversation, and the event data will show exactly what that share is.

Handover Deliverables

- ☐ Private Git repository, client as owner, with clean commit history and a tagged release at launch
- ☐ `README` : local setup, environment variables, build and deploy commands, dependency notes
- ☐ `CONTENT.md` : written for a non-developer — how to change a price, add a fragrance, publish a Story, replace an image, add a turntable sequence
- ☐ `ANIMATION.md` : the ten moments, where each lives in the codebase, and how to adjust timing without breaking the tier system
- ☐ Design files: full page designs, component library, tokens, exportable assets
- ☐ Media shot list and specifications, for future product launches
- ☐ Cloudinary structure documentation and the named-transformation list
- ☐ Analytics dashboard configured with the Section 13 events as saved views
- ☐ Backup archive of all original, un-transformed media
- ☐ Recorded training walkthrough
- ☐ Thirty-day defect window, and a written statement of what is and is not covered by it

WHERE THIS BUILD WILL ACTUALLY GO WRONG — READ BEFORE STARTING

The turntable payload. It is the single largest asset on the site and the easiest thing to let sprawl. Set the frame count and per-frame budget in week one and hold them.

Video scrubbing on iOS. Assigning `currentTime` too eagerly, or using a low-keyframe-density encode, produces stutter that no amount of easing will hide. Prototype this in week three, before it is load-bearing.

Pin and viewport height on mobile Safari. Budget real time for `dvh`, toolbar collapse and `ScrollTrigger.refresh()`. Every pinned section is exposed to it.

Media arriving late or off-spec. Turntable frames shot with a shifting bottle or inconsistent exposure cannot be salvaged in post. Review the first sequence the day it is shot, not the week the section is built.

Tier C being treated as an afterthought. Build it as a deliverable in its own right. It is what a meaningful share of visitors, and every accessibility audit, will actually see.
